SUMMARY

Frontend engineer with 4+ years shipping production React and Next.js applications, currently Lead Software Engineer on enterprise SaaS platforms. Specialise in frontend architecture, SSR and Core Web Vitals performance (took a flagship dashboard from ~5s to under 1.5s), and type-safe TypeScript codebases — with enough Node.js and database range to deliver features end to end. Run an AI-augmented delivery workflow (Claude Code, GitHub Copilot) that lifted team feature throughput ~40% while holding code review and QA standards constant. Seeking a fully remote, full-time senior frontend role with an international product team.

AVAILABILITY & REMOTE PREFERENCE

- **Primary preference: Fully remote**, full-time, with international teams (US, UK, EU, Canada, Australia, Singapore).
- **Secondary preference: On-site or hybrid** roles in Surat, Gujarat, India.
- **Time zone: IST (UTC+5:30)** — full working-hours overlap with EU and UK, 4+ hours daily overlap with US Eastern; flexible for scheduled US Pacific calls.

TECHNICAL SKILLS

Core: React.js, Next.js (App Router, Server Components, ISR/SSR/SSG), TypeScript, JavaScript (ES6+), HTML5, CSS3

State & Data: TanStack Query, TanStack Router, TanStack Start, Zustand, Redux Toolkit, React Context, REST APIs, WebSockets, Axios

UI & Styling: Tailwind CSS, shadcn/ui, Material UI, Styled Components, Bootstrap, responsive & cross-browser design

Performance & SEO: Core Web Vitals, Lighthouse auditing, caching, code splitting, lazy loading, image optimisation, structured data (JSON-LD), Open Graph

Backend & Data: Node.js, Express.js, MongoDB, PostgreSQL, Redis, API design and integration

Tooling & Cloud: Git, GitHub, GitHub Actions, AWS, Vercel, Vite, Webpack, npm/yarn/pnpm

AI-Assisted Engineering: Claude & Claude Code, GitHub Copilot, prompt engineering, spec-driven code generation, AI-assisted refactoring, review and debugging

Practices: Frontend architecture, technical standards, code review, mentoring, Agile delivery, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Senior NextJs Developer

eLaunch Solution Private Limited · Surat, India · April 2026 – August 2026

- Led a small frontend team producing pixel-perfect, mobile-responsive templates for online casino platforms — from Figma handoff to production, with a focus on speed, consistency and reusable components.

Lead Software Engineer

HVG Infotech Private Limited · Surat, India · January 2024 – April 2026

- Own **frontend architecture** for enterprise SaaS products, defining technical standards, review gates and delivery practices.
- Cut flagship dashboard load time from **~5s to under 1.5s (~70% faster)** by restructuring data fetching around TanStack Query caching, request deduplication and query-level optimisation.
- Architected Next.js **App Router + React Server Components** implementations optimised for SEO and time-to-interactive, achieving **100/100 Lighthouse SEO** with structured data powering rich search and social previews.
- Introduced an **AI-augmented development workflow** (Claude Code, GitHub Copilot) built on spec-first prompting and mandatory human review, increasing feature throughput **~40%** without relaxing code-review or QA standards.
- Mentor engineers through code review, pairing and architecture walkthroughs; authored the team's frontend conventions and pull-request checklist.

Software Engineer

HVG Infotech Private Limited · Surat, India · December 2022 – December 2023

- Delivered client-facing web applications in **React, Next.js and TypeScript**, from requirements through production release and maintenance.
- Built complex UI surfaces including data-visualisation charts, interactive filterable data tables and multi-step form wizards with validation.
- Standardised server state on **TanStack Query** and client state on **Zustand / Redux Toolkit**, eliminating duplicated fetch logic and redundant network calls across the codebase.
- Integrated **REST APIs and WebSocket** channels to power real-time data updates and in-app notifications.
- Shipped responsive, cross-browser interfaces with Tailwind CSS, shadcn/ui and Material UI.

Frontend Developer

Invints Infotech LLP · Surat, India · June 2022 – November 2022

- Built e-commerce web applications and **Shopify** storefronts with a focus on conversion and page-speed.
- Translated Photoshop mockups into pixel-accurate, mobile-first interfaces (HTML5, CSS3, JavaScript, jQuery, Bootstrap) and tuned load performance and cross-browser compatibility.

SELECTED PROJECTS

Investment Analytics SaaS Platform

Lead Frontend & Architecture Engineer · Next.js, React, TypeScript, Tailwind, shadcn/ui, Node.js, PostgreSQL, Redis, AWS

Self-serve platform giving retail investors automated stock ratings, portfolio analysis and backtesting.

- Architected the frontend on Next.js Server Components for SEO and first-load performance; delivered **100% Lighthouse SEO** and a **70% reduction in dashboard load time**.
- Built the **CAGR Ratings Engine UI**, surfacing 300+ metrics per stock through a visual star-rating system that made dense quantitative data scannable.
- Developed interactive **backtesting tools** with historical simulations, performance graphs and multi-portfolio comparison charts.
- Shipped Pro-tier features — watchlists, real-time alerts, screeners, downloadable reports — on **WebSockets and Redis caching** for near real-time updates.

Enterprise Product Specification Management System

Full-Stack Developer · React, TypeScript, TanStack Query, Zustand, Tailwind, shadcn/ui, Node.js, Express, MongoDB

Collaborative system for managing complex hardware product specifications across sales, delivery and customer teams.

- Built the full stack — React frontend and Node.js/MongoDB backend — for specification authoring, categorisation and export.
- Implemented **role-based access control across 5 user tiers** (Super Admin, Admin, Project Manager, Sales, Customer) with tier-specific views and permissions.
- Engineered advanced data tables with multi-dimensional filtering, sorting, saved filter presets and export, cutting the time to retrieve a specification set.
- Paired **TanStack Query with Zustand** for server-state caching and optimistic updates, keeping large spec tables responsive under frequent edits.

AI-AUGMENTED ENGINEERING

- Treat AI as part of the toolchain, not a shortcut: **specification → implementation plan → generated scaffold → human review → tests**, so generated code meets the same bar as hand-written code.
- Use Claude Code and GitHub Copilot for large-scale refactors, framework migrations, edge-case discovery, type and schema generation, and first-pass code review.
- Design **repo-level context and reusable prompt templates** so AI output matches existing team conventions and architecture.
- Extend beyond the frontend boundary — build and modify Node.js/Express endpoints, adjust schemas and write integration glue — to keep feature delivery unblocked.

EDUCATION

Diploma in Frontend Web Development

Creative Design and Multimedia Institute · Surat, Gujarat, India

Languages: English (professional working proficiency), Hindi, Gujarati
